PRODUCT APPLICATIONS

This 1980LM LED Flagpole Light is ideal for properly lighting flags. The lights can be angled for up lighting or down lighting which makes it perfect for illuminating any flag throughout the night!

PRODUCT SPECIFICATIONS

TYPE: 1980lm Solar Powered LED Flagpole light

PRODUCT CODE: C8FG29

RATED WATTS: 1W Per Light (9W Total)

LUMENS: 1980lm (bright mode)

COLOR RANGE: 5000K (clear/ white)

WORKING MODE: dusk to dawn (activated when sun goes down & includes push button)

WORKING TIME: Up to 12 Hours when fully charged

BATTERY: 3.7V 18,000mA lithium rechargeable battery

BATTERY LIFE: 3-5 Years

WIND RATING: 50 to 65 MPH

DIMENSIONS:

SOLAR PANEL: 13 3/8" W x 9 1/4" H x 1 3/4"

SHIPPING: 15" W x 4 1/2" H x 14" D

MATERIAL: aluminum head, die cast aluminum frame, stainless steel hook

HARDWARE: comes with all required mounting accessories including installation tool

IP RATING: IP65

APPLICATIONS: On pole to illuminate flags, gardens and more!

WARRANTY: 1 Year

RECOMMENDED POLE SIZE: The included bracket will fit on any pole between 2 3/8" to 6" in size

FREQUENTLY ASKED QUESTIONS

Q: Do I need to charge the solar panel/rechargeable battery before using it?

A: Yes. Take the solar panel/battery unit and lay it out in bright sunshine for 2 full days of bright sunlight (ex. No cloudy weather, no shade etc.) to receive an initial charge before installation. Make sure the unit is “off” when charging (button compressed “in” = “off” position) and is not connected to the fixture heads. After charging is complete, you can turn “on” the unit by clicking the button so it is no longer compressed and is sticking out. Then securely connect the fixture heads to the unit.

Q: My lights are flashing, what does this mean?

A: The battery is not sufficiently charged or the solar panel/battery unit may need to be replaced.

Q: Why isn't my light lasting the whole night?

A: This unit is not receiving a strong enough charge during the daylight hours. This may be caused by poor panel placement, obstructions/shade, cloudy weather or dirty panel. Adjusting these issues typically solves it.

Q: I charged my unit for 2 days but it has never turned on. Why?

A: For the initial charge and operation, the unit must be placed in bright sunlight outside (ex. no cloudy weather, no shade etc.) with the panel/battery unit turned “off” and disconnected from the fixture heads. To turn “on” the unit, please click the button so it is no longer compressed and is sticking out. Then securely connect the fixture heads to the unit.

Q: Would any pole work with this light fixture?

A: We offer hardware that fits any pole between 2 3/8” to 6” in diameter. You can use larger steel bands on a larger diameter pole. We recommend this fixture for poles that are 25-30 ft.

Q: What is the difference between the 5000K and 3000K versions?

A: The 5000K color temperature light fixture comes standard with the 1980lm light and features a cool/bright white light tone, while the 3000K option features a warm white light tone.

Q: How bright is the light?

A: The light is 1980 lumens. The higher the fixture's lumen rating is the brighter the light's appearance is.

Q: Why is there a Double Solar Panel option?

A: We have that option for our customers who live in areas where sunshine is not always plentiful. The additional panel allows the batteries to recharge quicker with limited sunshine.

Q: Can this flagpole light be AC powered?

A: Yes! You can purchase an AC powered version.

Q: What does the flagpole light come with?

A: Our standard 1980lm Solar LED Flagpole Light includes: 3 LED fixture heads, 1 solar panel/rechargeable battery unit, 4 arm mounts, and 4 steel bands.

Q: Do you have a video featuring the light?

A: Yes, we have an un-boxing video for you to reference on our YouTube channel and under the product listing on our website.
